-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 2 and 4 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The examiner does not believe that one of ordinary skill in the art would be able to make and/or use propeller that can be folded back without undue experimentation. The examiner cannot find a discussion as to the mechanisms that would be used to perform the actual unfolding steps. Furthermore the examiner believes that the act of stopping the propellers and folding them into a more aerodynamic condition would result in unstable aerodynamic effects.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3644

4. Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as being anticipated by 3,120,359). Sprecher discloses an airship having four engines positioned in different planes forward of the ship and spaced equidistant from the fuselage and from each other, the engines are capable of equal thrust and are forward of the ship's center of gravity. These engines may be channel wings in various adaptations such as turbo jets, ramjets, atomic power, or controllable rockets. Control mechanisms are provided for effecting measured thrust of any or all the engines above or below the equal thrust plane. The tail assembly #17 includes a plurality of fins (24, 25, 26, 27) which are spaced radially between engine supports 19, 20, 21, 22 and are capped with retractable fairings 8, 29, 30, 31 and which serve as landing pads on which the ship rests upon the ground. Each of the landing pads is pivotally connected to the outer terminal of the arms 28', 29', 30' and 31'.
